

Primis Cloud

Access Control as a Service (ACaaS)

Hosted in Identiv's secure cloud infrastructure, access control via Primis Cloud is available anytime, anywhere.

Primis Cloud brings our robust, feature-rich Primis access control system to our Access Control as a Service (ACaaS) portfolio. Available anytime, anywhere, and hosted entirely by Identiv, Primis Cloud can manage all aspects of your access control system remotely.

As a cloud-based solution, Identiv ensures that Primis Cloud software is patched, upgraded, and maintained seamlessly with no interruption to daily operations. Compatible with Identiv's encryption bridges, EG-2, and tertiary devices, Primis Cloud delivers the flexibility to meet the needs of even the most complex business, personnel, and facility requirements.

Hosting Primis Cloud in Identiv's secure AWS virtual environment ensures a protected data path while supporting access through any compatible browser on any device. Administrators and users get the flexibility to access the full capabilities of Primis regardless of their location. Primis's browser based administration is intuitive and easy to use.

Accessible 24/7, Primis Cloud system operation is always available and up-to-date. In the event of a loss of network connection on-premises, the local EG-2 or tertiary Primis Cube server ensures seamless operation until the connection is restored.

24/7 Open Accessibility

- Cloud-based ACaaS means access to software is available anytime, anywhere
- Accessible via any device with compatible web browser

Safe and Secure

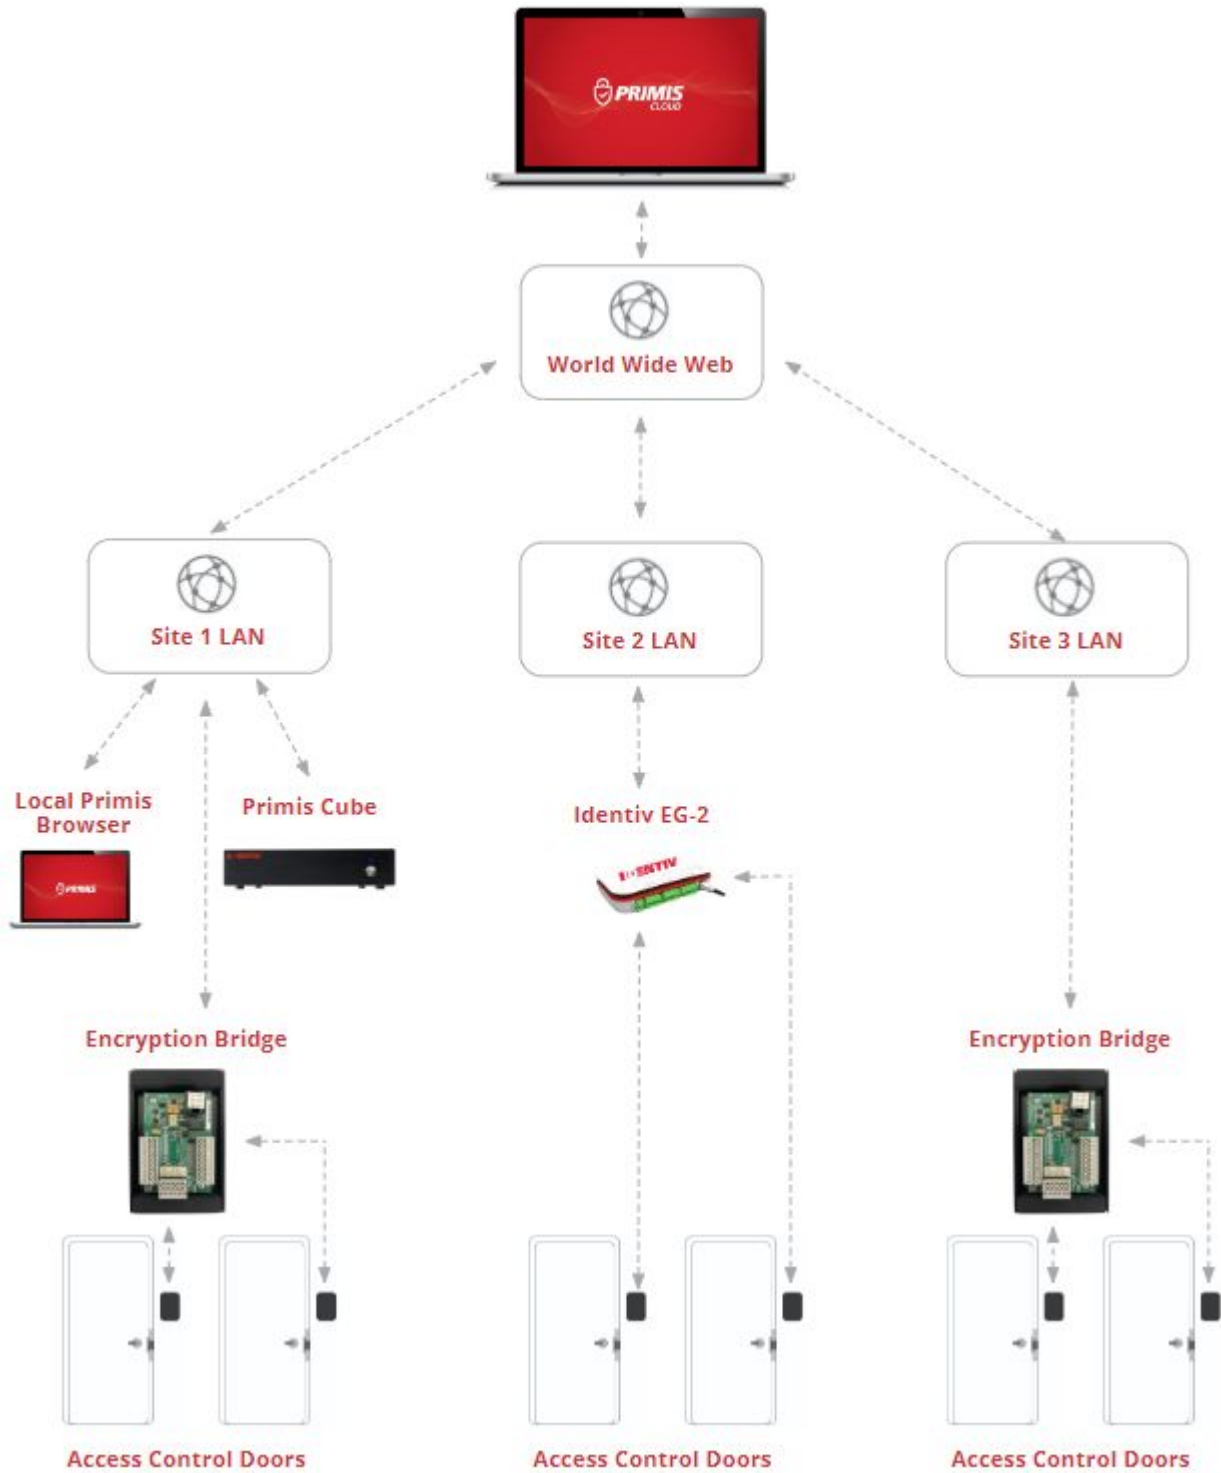

- Stored in Identiv's secure AWS environment
- Easy to limit credentials to only those who need access

Worry-Free Updates

- No need to manage upgrades and patches, your system is always up-to-date
- Updates occur seamlessly in the background with no operational interruptions

Redundancy and Failover

- Local redundant Primis Cube available for added security
- Ensures no interruption in operation during network outage
